

## FlameShield Fire Retardant Noticeboards

# Why use Fire Retardant Noticeboards?

The consequence of fire spread within areas of circulation, such as corridors and escape routes, presents a high risk to the occupants of the building.

Materials and items on the walls of these areas should not propagate or accelerate a fire, therefore allowing the occupants the opportunity to exit safely.

To comply with building regulations, it is a legal requirement that noticeboards used in high risk areas must be fire retardant.

## Spaceright Europe is the UK's creator and leading manufacturer of Fire Retardant Noticeboards

- ✓ The **Spaceright FlameShield Noticeboard** core and bonded textile are fire retardant as a **composite**, meeting **Class 0** when assessed to **BS 476 Parts 6 and 7**, and comply with **Class B-s1, d0** when tested to **BS-EN13501-1: 2002**.
- ✓ The clear plastic doors used in **FlameShield Tamperproof Noticeboards** are tested separately, and conform to **BS 476 Parts 6 and 7, Class 1Y**.
- ✗ **Beware** of buying boards that claim to be fire retardant through the use of fire retardant components but have not been officially tested to the appropriate fire retardant standards as a composite. Noticeboards that are not certified to **BS 476 Parts 6 and 7** and **BS-EN13501-1: 2002** are not fire retardant and are not suitable for use in high risk areas such as corridors.
